

High Pressure Gases and Liquefied-Compressed Gases (LPG) (ie Drinks Dispense gas, Calor gas, Helium)

The following general practices are recommended for the safe handling and storage of high pressure gaseous and liquefied-compressed gases in transportable containers.

- ✓ Only trained persons should handle compressed gases.
- ✓ Observe all regulations and local requirements regarding the storage of containers.
- ✗ **Do not** remove or deface labels provided by the supplier for identification of the container contents.
- ✓ Ascertain the identity of the gas before using it.
- ✓ Know and understand the properties and hazards associated with each gas before using it.
- ✓ Establish and implement plans to cover any emergency situations that might arise. When doubt exists as to the correct handling procedure for a particular gas contact the supplier.
